

# Verify Wireless Coverage

Name: Ch1-BER  
Latitude: 45.7194533  
Longitude: -123.9282900  
Value: 1.07  
Ch1-RSSI: -101.30  
Ch1-BER: 1.07  
Ch1-QOS: 99.52

*Take the guess-work out of digital radio coverage and performance.*

Survey Technologies (STI) coverage testing solutions utilize test mobiles for coverage and performance measurements of DMR and P-25 phase I/II.

If you are responsible for the coverage of a critical communication system, then STI can help you verify and document the digital wireless performance.

Leveraging mobile radio selectivity and sensitivity, STI's Field Test 7 is able to log accurate 40 lambda compliant samples of signal strength and bit error rate, even in difficult RF environments and marginal signal conditions.

Field Test 7 analyzes measurements statistically to quantify coverage as required in acceptance tests, and also graphically displays coverage as colored measurements or contour plots.

Verify the coverage and performance of your critical communication system with STI Field Test 7, and eliminate the guess-work.
